Review report to the Directors of Ajman Bank PJSC

Introduction

We have reviewed the accompanying interim balance sheet of Ajman Bank PJSC ("the Bank") as of 31 March 2009 and the related interim statements of income, changes in equity and cash flows for the period from 8 January 2007 to 31 March 2009, and a summary of significant accounting policies and other explanatory notes. Management is responsible for the preparation and fair presentation of this interim financial information in accordance with International Financial Reporting Standards. Our responsibility is to express a conclusion on this interim financial information based on our review.

Scope of Review

We conducted our review in accordance with International Standard on Review Engagements 2410, "Review of Interim Financial Information Performed by the Independent Auditor of the Entity." A review of interim financial information consists of making inquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with International Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion.

Conclusion

Based on our review, nothing has come to our attention that causes us to believe that the accompanying interim financial information does not give a true and fair view of the financial position of the Bank as at 31 March 2009, and of its financial performance and its cash flows for the period from 8 January 2007 to 31 March 2009 in accordance with International Financial Reporting Standards.

Ajman Bank PJSC

Notes to the interim financial statements for the period from 8 January 2007 to 31 March 2009

1 Incorporation and principal activities

Ajman Bank (P.J.S.C) ("the Bank") is incorporated as a Public Joint Stock Company. The Bank has its registered office at Ajman Free Zone, Block C, Level 13, Al Mina Road, P.O. Box 7770, Ajman, United Arab Emirates ("UAE") and was legally incorporated on 17 April 2008. The Bank was registered with the Securities and Commodities Authority ("SCA") on 12 June 2008 and obtained a license from the UAE Central Bank to operate as a Head Office on 14 June 2008. On 1 December 2008, the Bank obtained a branch banking license from the Central Bank of the UAE and commenced operations on 22 December 2008.

The principal activities of the Bank are undertaking banking, financing and investing activities through various Islamic instruments such as Murabaha, Wakala, Sukuk and Ijarah. The activities of the Bank are conducted in accordance with the Islamic Sharia'a principles and within the provisions of its Memorandum and Articles of Association.

Although the Bank commenced operations in 2008, it commenced incurring pre-operating expenses from 8 January 2007 and, accordingly, these interim financial statements includes pre-operating expenses incurred from that date.

2 Summary of significant accounting policies

The significant accounting policies adopted by the Bank in the preparation of these interim financial statements are set out below:

Basis of preparation

These interim financial statements are prepared in accordance with International Financial Reporting Standards ("IFRS") and under the historical cost convention.

The preparation of interim financial statements in conformity with IFRS requires the use of accounting estimates. It also requires management to exercise its judgment in the process of applying the Bank's accounting policies. The areas involving a higher degree of judgment or complexity, or areas where assumptions and estimates are significant to these financial statements are disclosed under the relevant accounting policies.

Standards, amendments and interpretations to published standards that are not yet effective

The following new standards, amendments and interpretations to existing standards that have been published, are mandatory for the Bank's accounting periods commencing on or after 1 January 2009, and have not been early adopted by the Bank.

- IFRS 8 – 'Operating segments' (effective for annual periods commencing 1 January 2009).
- IAS 23 (amendment), 'Borrowing costs' (effective for annual periods commencing 1 January 2009).
- IFRS 2 (amendment) 'Share-based payment' (effective for annual periods commencing 1 January 2009).
- IFRS 3 (amendment), 'Business combinations' and consequential amendments to IAS 27, 'Consolidated and separate financial statements', IAS 28, 'Investments in associates' and IAS 31, 'Interests in joint ventures', effective prospectively to business combinations for which the acquisition date is on or after the beginning of the first annual reporting period beginning on or after 1 July 2009.

Ajman Bank PJSC

Notes to the interim financial statements for the period from 8 January 2007 to 31 March 2009 (continued)

2 Summary of significant accounting policies (continued)

Foreign currencies

Items included in the interim financial statements of the Bank are measured using the currency of the primary economic environment in which the Bank operates (“the functional currency”). The financial statements are presented in Arab Emirates Dirhams (“AED”), which is the Bank’s functional and presentation currency.

Transactions denominated in foreign currencies are translated into AED at the rates of exchange ruling on the dates of the transactions. Monetary assets and liabilities denominated in foreign currencies are translated into AED at the rates of exchange ruling at the balance sheet date. The resulting exchange differences are dealt with in the income statement.

Investments in Islamic financing instruments

All investments in Islamic financing instruments are non-derivative financial instruments with fixed or determinable payments that are not quoted in an active market. They arise when the Bank provides funds directly to a debtor with no intention of trading in the financial instruments. Investment in Islamic financing instruments is initially measured at fair value, and is subsequently measured at their amortized cost. Investment in Islamic financing instruments is reported net of impairment provisions.

Murabaha is a contract of sale between the Bank and its customer for the sale of goods at a price which includes a profit margin agreed by both parties. As a financing technique it involves the purchase of goods by the Bank as requested by its customer. The goods are sold to the customer with a mark-up. Repayment, usually in installments, is specified in the contract.

Wakala involves the Bank providing a certain sum of money to an agent, who invests it according to specific conditions for a certain fee (a lump sum of money or a percentage of the amount invested). On maturity, the Bank receives the invested amount from the agent, along with the agreed rate of return.

Investment securities

Investment securities comprise a Held-to-Maturity (“HTM”) investment which is a non-derivative financial asset with fixed or determinable payments and fixed maturity that the Bank’s management has the positive intention and ability to hold to maturity. If the Bank were to sell other than an insignificant amount, the entire category would be reclassified as Available-For-Sale.

Regular-way purchases and sales of investment securities are recognized on the trade date, which is the date on which the Bank commits to purchase or sell the asset. HTM investment securities are initially recognized at fair value plus transaction costs and are subsequently measured at amortized cost. Investment securities are derecognized when the rights to receive cash flows from the financial asset have expired or where the Bank has transferred substantially all risks and rewards of ownership.

Ajman Bank PJSC

Notes to the interim financial statements for the period from 8 January 2007 to 31 March 2009 (continued)

2 Summary of significant accounting policies (continued)

Impairment of financial assets

The Bank assesses at each balance sheet date whether there is objective evidence that a financial asset or group of financial assets is impaired. A financial asset or a group of financial assets is impaired if and only if there is objective evidence of impairment as a result of one or more events that have occurred after the initial recognition of the asset and that event has an impact on the estimated future cash flows of the asset that can be reliably estimated. If there is objective evidence that an impairment loss on investments in Islamic financing instruments carried at amortized cost has been incurred, the amount of the loss is measured as the difference between the asset's carrying amount and the present value of expected future cash flows discounted at the financial instrument's original effective rate of return, including any amounts recoverable from guarantees and collateral, and recognized in the income statement.

If, in a subsequent period, the amount of the impairment loss decreases and the decrease can be related objectively to an event occurring after the impairment was recognized (such as an improvement in the debtor's credit rating), the previously recognized impairment loss is reversed through the income statement.

Impairment of non-financial assets

Assets that have an indefinite useful life are not subject to amortization and are tested annually for impairment. Assets that are subject to amortization are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable.

An impairment loss is recognized for the amount by which the asset's carrying amount exceeds its recoverable amount. The recoverable amount is the higher of an asset's fair value less costs to sell and value in use. For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash flows (cash-generating units). Non-financial assets other than goodwill that have suffered an impairment loss are reviewed for possible reversal of impairment at each reporting date.

Ajman Bank PJSC

Notes to the interim financial statements for the period from 8 January 2007 to 31 March 2009 (continued)

3 Financial risk management

The Bank's activities expose it to a variety of financial risks and involve the analysis, evaluation, acceptance and management of some degree of risk or combination of risks. Taking risk is core to the financial services business, and the operational risks are an inevitable consequence of being in business. The Bank's aim is, therefore, to achieve an appropriate balance between risk and return and minimize potential adverse effects on the Bank's financial performance.

Risk is inherent in the Bank's activities but it is managed through a process of ongoing identification, measurement and monitoring, and is subject to risk limits and other controls.

The Bank's risk management policies are designed to identify and analyze these risks, to set appropriate risk limits and controls, and to monitor the risks and adherence to limits by means of realizable and up-to-date information systems. The Bank regularly reviews its risk management policies and systems to reflect changes in markets, products and emerging best practice.

Risk management is carried out by the Risk Management Division under policies that are approved by the Board of Directors. The Risk Management Division is responsible for the independent review of risk management and the control environment. The most important types of risk that the Bank is exposed to are credit risk and concentrations of risk, market risk and liquidity risk. Market risk includes profit rate risk, currency risk and price risk. The Bank is also subject to operational risks. The independent risk control process does not however, monitor business risks such as changes in the environment, technology and industry. These risks are monitored through the Bank's strategic planning process.

Risk management structure

The Board of Directors is ultimately responsible for identifying and controlling risks; however, there are separate independent bodies responsible for managing and monitoring risks of the Bank.

Board of Directors

The Board of Directors is responsible for the overall risk management approach and for approving the risk strategies and principles.

Audit, Risk & Compliance Committee of the Board ("ARCC")

This Committee assists the Board of Directors in discharging its responsibilities with respect to ensuring that the Bank's activities comply with the statutory laws and regulations, the system of internal control over financial reporting and with the Bank's code of conduct.

Ajman Bank PJSC

Notes to the interim financial statements for the period from 8 January 2007 to 31 March 2009 (continued)

3 Financial risk management (continued)

Risk management structure (continued)

Risk Management Division (“RMD”)

The RMD is responsible for implementing and maintaining risk related procedures to ensure an independent control process. The division is responsible for credit approval, credit administration, portfolio management, credit risk, market risk, operational risk and overall risk control.

Internal audit

Risk management processes throughout the Bank are audited periodically by the internal audit which examines both the adequacy of the procedures and the Bank’s compliance with the procedures. Internal audit discusses the results of its assessments with management, and reports its findings and recommendations directly to the Audit Committee.

Risk measurement and reporting systems

The Bank measures risks using conventional qualitative methods for credit, market and operational risks. Further, the Bank also uses quantitative analysis and methods to support revisions in business and risk strategies as and when required. These analysis and methods reflect both the expected loss likely to arise in normal course of business or unexpected losses in an unforeseen event based on simple statistical techniques and probabilities derived from historical experience. The Bank also runs stress scenarios that would arise in the event that extreme events which are unlikely to occur do, in fact, occur.

Monitoring and controlling risks is primarily performed in relation to limits established by the Bank. These limits reflect the business strategy and market environment of the Bank as well as the level of risk that the Bank is willing to accept, with additional emphasis on selected industries.

Ajman Bank PJSC

Notes to the interim financial statements for the period from 8 January 2007 to 31 March 2009 (continued)

3 Financial risk management (continued)

Risk mitigation

As part of its overall risk management, the Bank uses various methods to manage exposures resulting from changes in credit risks, profit rate risk, foreign currencies, equity risks, and operational risks.

The Bank seeks to manage its credit risk exposures through diversification of financing and investment activities to avoid undue concentration of risk with individuals and groups of customers in specific locations or businesses. The Bank actively uses collateral to reduce its credit risks.

Market risk is managed on the basis of predetermined asset allocation across various asset categories and continuous appraisal of market conditions for expected movements in foreign exchange rates, bench mark profit rates and equities.

In order to guard against liquidity risk, management has diversified funding sources and assets are managed in the context of the Bank's overall liquidity, with in consideration being given to maintaining a healthy balance of cash and cash equivalents.

To manage all other risks, the Bank has developed a detailed risk management framework to identify and apply resources to mitigate the risks.

Risk concentration

Concentrations arise when a number of counterparties are engaged in similar business activities, or activities in the same geographic region, or have similar economic features that would cause their ability to meet contractual obligations to be similarly affected by changes in economic, political or other conditions. Concentrations indicate the relative sensitivity of the Bank's performance to developments affecting a particular industry or geographical location.

In order to avoid excessive concentrations of risk, the Bank's policies and procedures include specific guidelines to focus on maintaining a diversified portfolio. Identified concentrations of credit risks are controlled and managed accordingly.

Ajman Bank PJSC

Notes to the interim financial statements for the period from 8 January 2007 to 31 March 2009 (continued)

3 Financial risk management (continued)

Credit risk and concentrations of risk

Credit risk measurement

The Bank's Risk Management Framework assesses the probability of default of individual counterparties using internal rating tools tailored to the various categories of counterparties. The framework has been developed internally and combines statistical analysis with credit officer judgment and is validated, where appropriate, by comparison with externally available data.

The Bank's exposure to credit risk is measured on an individual counterparty basis, as well as by group of counterparties that share similar attributes. To reduce the potential of risk concentration, credit limits have been established and are monitored in the light of changing counterparty and market conditions.

Management of credit risk

The Bank's Risk Management Framework includes:

- establishment of an authorization structure and limits for the approval and renewal of credit facilities;
- reviewing and assessing credit exposures in accordance with the authorization structure and limits, prior to facilities being sanctioned to customers; renewals and reviews of facilities are subject to the same review process;
- diversification of lending and investment activities;
- limiting concentrations of exposure to industry sectors, geographic locations and counterparties; and
- reviewing compliance, on an ongoing basis, with agreed exposure limits relating to counterparties, industries and countries and reviewing limits in accordance with the Bank's risk management strategy and market trends.

Risks relating to credit-related commitments

The Bank makes available to its customers, guarantees and letters of credit which require that the Bank makes payments in the event that the customer fails to fulfill certain obligations to other parties. These instruments expose the Bank to a similar risk to financing and investing assets and these are monitored by the same control processes and policies.

Impairment and provisioning policies

A provision is made against a specific asset/exposure when the relevant exposure or asset is considered impaired and the underlying security/collateral does not fully cover the exposure. A specific provision is established as soon as full recovery of an asset is considered doubtful. The specific provision amount is equal to the amount needed to reduce the carrying value of the asset to its expected recoverable amount.

Ajman Bank PJSC

Notes to the interim financial statements for the period from 8 January 2007 to 31 March 2009 (continued)

3 Financial risk management (continued)

Credit risk and concentrations of risk (continued)

At 31 March 2009, the Bank's maximum exposure to credit risk before collateral held or other credit enhancements is as follows:

	31 March 2009 AED'000
Investments in Islamic financing instruments	1,207,245
Investment security	40,436
Other assets	8,333
	<hr/>
	1,256,014
	<hr/>
Contingencies and commitments	101,765
	<hr/>

The above table represents a worse case scenario of credit risk exposure of the Bank at 31 March 2009 without taking account of any collateral held or other credit enhancements attached. For on-balance-sheet assets, the exposures set out above are based on net carrying amounts as reported in the balance sheet at 31 March 2009.

Market risk

Market risk arises from changes in market rates such as profit rate. Market risk management is designed to limit the amount of potential losses on open positions which may arise due to unforeseen changes in profit rates, currency rates and price movements. The Bank uses appropriate models, based on standard market practice, for the valuation of its positions and receives regular market information in order to regulate market risk.

The trading market risk framework comprises the following elements:

- Limits to ensure that risk-takers do not exceed aggregate risk and concentration parameters set by senior management.
- Independent mark-to-market valuations, reconciliation of positions and tracking of stop-losses for trading positions are performed on a timely basis.

The policies, procedures and the trading limits are set to ensure the effective implementation of the Bank's market risk policies. These policies are reviewed periodically to ensure they remain in line with the Bank's overall market risk policies.

Ajman Bank PJSC

Notes to the interim financial statements for the period from 8 January 2007 to 31 March 2009 (continued)

3 Financial risk management (continued)

Market risk (continued)

Profit rate risk

Profit rate risk arises from the possibility that changes in profit rates will affect future profitability or the fair values of financial instruments. The Bank is exposed to profit rate risk as a result of mismatches or gaps in the amounts of assets, liabilities and off-balance sheet instruments that mature or re-price in a given period.

The Bank is exposed to the effects of fluctuations in the prevailing levels of profit rates which arise from the investments of AED 1,207.2 million in Islamic financing instruments, AED 40.4 million in an investment security, AED 173 million in customer deposits and placements by banks of AED 84 million.

During the period from 8 January 2007 to 31 March 2009, had prevailing profit rates increased/decreased by 50 basis points, with all other variables remaining constant, the impact on the results and equity of the Bank would have been as follows:

Product	Benchmark	Impact on results and equity of the Bank	
		Three month period ended 31 March 2009 AED'000	Period from 8 January 2007 to 31 March 2009 AED'000
Investments in Islamic financing instruments	± 50 basis points change in profit rates	1,509	6,036
Investment security	± 50 basis points change in profit rates	51	202
Customer deposits	± 50 basis points change in profit rates	216	865
Placements by banks	± 50 basis points change in profit rates	105	420

Currency risk

During the period ended 31 March 2009, the Bank was not exposed to any significant foreign currency risk as a majority of its transactions were in the Bank's functional currency.

Price risk

During the period ended 31 March 2009, the Bank was not exposed to any significant price currency risk as it did not own any investment securities that would be subject to price risk.

Ajman Bank PJSC

Notes to the interim financial statements for the period from 8 January 2007 to 31 March 2009 (continued)

3 Financial risk management (continued)

Liquidity risk

Liquidity risk is the risk that the Bank will be unable to meet its payment obligations when they fall due under normal and stress circumstances. To limit this risk, management has arranged diversified funding sources in addition to its core deposit base, manages assets with liquidity in mind, and monitors future cash flows and liquidity on a daily basis. This incorporates an assessment of expected cash flows and the availability of high grade collateral which could be used to secure additional funding, if required.

The primary tool for monitoring liquidity is the maturity mismatch analysis, which is monitored over successive time bands and across functional currencies. Guidelines are established for the cumulative negative cash flow over successive time bands.

Non-derivative cash flows

The table set out in Note 21 presents the cash flows payable by the Bank arising from remaining contractual maturities at the balance sheet date. The amounts disclosed in the table are the contractual undiscounted cash flows, whereas the Bank manages the inherent liquidity risk based on expected undiscounted cash flows.

Capital management

The Bank calculates its risk asset ratio in accordance with guidelines established by the Central Bank of the UAE, which prescribes a minimum ratio of 10 % of total capital to total risk-weighted assets. This ratio complies with the assessment of capital adequacy ratio under the Basel I Accord and is calculated as follows:

	31 March 2009 AED'000
Tier 1 capital	
Share capital	1,000,000
Deductions from share capital	(6,638)
	<hr/>
Total capital	993,362
	<hr/>
Risk weighted assets	
On balance sheet	354,874
Off balance sheet	113,765
	<hr/>
Total risk weighted assets	468,639
	<hr/>
Risk asset ratio (%)	212 %
	<hr/> <hr/>
